PROFILE

Motivated and detail-oriented Computer Science undergraduate (2025) with strong proficiency in Python, SQL, Java(Basic, OOP Concepts) and Power BI. Experienced in delivering end-to-end data solutions—from web scraping and data preprocessing to model development, dashboarding, and deployment. Skilled in pandas, NumPy, scikit-learn, and DAX for analytics and machine learning workflows. Familiar with REST APIs, AWS cloud fundamentals, and version control using Git/GitHub. Strong grasp of SDLC, debugging, and modular code practices. Passionate about building scalable, production-ready systems that convert raw data into actionable business insights.

EDUCATION

B.TECH in Computer Science And Engineering , <i>Guru Nanak Institute of Technical Campus</i> CGPA : 7.41	2021 – 2025 Hyderabad
Narayana Junior College, Hyderabad , <i>Intermediate MPC</i> Marks : 904/1000	2018 – 2020 Hyderabad
ST.Thomas High School , <i>SSC</i> Grade : 8.7	2008 – 2018 Nirmal

SKILLS

Programming Language

Python, SQL, Java(Core, OOP Concepts)

Libraries & Frameworks

Pandas, NumPy, Matplotlib, Seaborn, scikit-learn

Data Skills

Data Cleaning, EDA, Feature Engineering, Classification, Regression, Clustering, Model Evaluation

Tools & Platforms

Power BI (DAX, Data Modeling), Excel, Jupyter Notebook, VS Code, Git, GitHub

Additional Skills

Web Scraping (BeautifulSoup, Requests), Cloud Fundamentals (AWS), Prompt Engineering, Communication, Problem Solving, Quick Learning

PROJECTS

E-Commerce Laptop Analysis — Python Web Scraping & EDA

- Developed a robust web scraper using BeautifulSoup and Regex with pagination and anti-bot handling
- Cleaned and structured data using pandas and NumPy; performed EDA to uncover pricing trends
- Visualized insights with Matplotlib and Seaborn to support business decisions

Bank Customer Analysis — Power BI

- Cleaned and analyzed customer demographic and transaction data to identify churn and revenue patterns
- Built interactive dashboards using Power BI with DAX measures and data modeling
- Delivered business-ready visualizations to support marketing and retention strategies

House Price Prediction — Python & scikit-learn

- Built regression models using Linear Regression and Decision Tree Regressor
- Applied feature engineering and EDA on real estate data
- Delivered interpretable predictions to support strategic pricing decisions

CERTIFICATION

- **Data Science Foundations – Data Analyst Track** *Innomatics Research Labs* Covered Python, EDA And ML basics for analytics workflows
- **Java Developer Program** *Wipro TalentNext* Focused on OOP concepts, Java syntax, and basic application development
